About

Senior Data Engineer with 4+ years designing data pipelines, ETL processes, and end-to-end data integration solutions across AWS and GCP cloud platforms. Builds data warehouse and analytical data stores, implements data models and schema designs, and optimizes database performance. Works with business stakeholders on requirements analysis, delivering accurate, high-quality data the business can trust.

Skills

- Programming languages: Python, SQL, Scala, TypeScript
- Data processing: Spark, PySpark, Pandas, Snowpark, Kafka
- Cloud/data platforms: AWS, GCP, Databricks, Snowflake
- Other relevant skills: Data integration, ETL, data warehouse, schema design, Airflow, data quality

Experience

Senior Data Engineer September 2025 – Present
Palm *San Francisco, CA, US (Remote)*

- Built real-time and batch ETL pipelines with Apache Kafka and Apache Spark in Scala and SQL, delivering data integration for 90+ data sources by leveraging agentic coding workflows.
- Owned data modeling, schema design, data pipeline development, and orchestration in Apache Airflow end-to-end to launch 2 new data product categories, unlocking new partner opportunities.
- Optimized database performance by improving SQL queries and layering additional PostgreSQL database optimization, achieving up to 20x data pipeline processing speed.
- Built analytical and reporting data stores on an AWS S3 Parquet datalake with AWS Athena for querying and Metabase for visualization, decoupling analytical workloads and enabling self-serve BI.
- Strengthened data governance with schema registry, schema drift detection, and automated data quality monitoring, ensuring data accuracy and preventing issues from reaching downstream systems.

Data Analyst January 2025 – April 2025
Booklista *Tokyo, Japan (Hybrid)*

- Performed data mining in Snowflake with SQL and Python to build customer-segmentation data models, isolating a high-CLV segment driving 58% of revenue from 22% of the user base.
- Built Metabase reporting dashboards powered by Snowflake, integrating sales, product, and customer sources to deliver reporting for 15+ stakeholders.

Data Architect October 2023 – January 2025
Accenture *Tokyo, Japan (Hybrid)*

- Built end-to-end ETL processes with PySpark on AWS EKS orchestrated by Apache Airflow, integrating millions of records from 50+ data sources daily.
- Architected enterprise-scale data marts for KDDI's marketing analytics, leading 4 engineers from requirements analysis and technical design through on-time delivery.
- Strengthened data governance by implementing a data catalog on AWS Glue Data Catalog, improving data lineage tracking and accelerating incident resolution.

Junior Data Engineer June 2022 – September 2023
Panalyt *Tokyo, Japan (Remote)*

- Developed data pipelines in Python and SQL that centralized client data into a BigQuery data warehouse on GCP, combining in-warehouse SQL transformations with external Pandas processing.
- Implemented data validation with Great Expectations, ensuring data quality and accuracy by catching data quality issues at ingestion.
- Built monitoring dashboards in Looker Studio to track data pipeline health, detect data anomalies, and ensure SLA compliance.

Education

Le Wagon Tokyo, Tokyo, Japan(Jan 2022 - Mar 2022) : Data Science - Batch 796
University of Oregon, Oregon, US(Sep 2018 - Dec 2020) : BS in Marketing
Green River College, Washington, US(Sep 2016 - Jun 2018) : AA in Business
